## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of claims 1-23 and 41-44 in the reply filed on 4/18/2005 is acknowledged. The traversal is on the ground(s) that Office routinely examines claims directed to embedding a digital watermark and related methods for reading the digital watermark in the same application. This is found persuasive.

The requirement is withdrawn.

Claims 1-44 are pending.

### **REASON FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance: instant application uses segmentation technique for embedding and detecting digital watermark in multimedia signals. The key difference between the instant application and closest prior art is in the manner the watermark embedder segments the signals. In the instant application as recited in independent claims, a watermark embedder segments a media signal into arbitrary shaped region according to at least one of the signal characteristic of the media signal. Although, Tewfik et al (US 6,031,914) disclose a method and apparatus for embedding data, but Tewfik et al fail to teach or fairly suggest a watermark embedder which segments a media signal into arbitrary shaped regions based on a signal characteristics.

Accordingly, claims 1-44 are allowed.
